No headings included in this document

1. **Test Plan:** A test plan outlines the overall testing approach for the project, including objectives, scope, resources, schedule, and test environment details. It provides a high-level view of the testing strategy.
2. **Test Cases:** Detailed descriptions of individual test scenarios or test scripts that specify the steps to be followed, the expected results, and the test data to be used. Test cases help ensure thorough testing of specific features or functionalities.
3. **Test Scripts/Automation Scripts:** In cases where automated testing is employed, We create automation scripts that automate the execution of test cases. These scripts include instructions for interacting with the software and verifying expected outcomes.
4. **Test Data:** Test engineers often need specific sets of test data to execute test cases effectively. This could include sample user profiles, input data, or database records.
5. **Test Logs and Reports:** Detailed logs and reports that document the results of test executions. This includes information about passed tests, failed tests, and any defects or issues identified during testing.
6. **Defect Reports (Bug Reports):** When we identify a defect or issue in the software, we should document it thoroughly. This includes describing the issue, steps to reproduce it, and its severity.
7. **Test Strategy:** In some cases, especially for larger projects, a test strategy document outlines the overarching testing approach, including types of testing (e.g., functional, performance, security), entry and exit criteria, and resource allocation.
8. **Regression Test Suites:** Documentation of test suites specifically designed for regression testing to ensure that new changes or features do not introduce regressions in existing functionality.
9. **User Acceptance Test (UAT) Documents:** Documents related to UAT, such as UAT test cases and UAT results, may be required.
10. **Test Summary Reports:** Summarized reports that provide an overview of the testing activities, including test progress, key findings, and recommendations for release decisions.
